DETAILED ACTION

Response to Amendment

1. The present Office action is made in response to the amendment filed on 6/27/07. It is noted that in the amendment, applicant has amended claims 1-4, 6-8 and 10-12. There is not any claim being added or canceled from the application. The pending claims 1-19 are examined in this Office action.

Specification

2. The lengthy specification which is amended by amendment of 6/27/07 has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

3. The objections to claims 1-19 are objected set forth in the previous Office action are overcome by the amendment to the claims as filed on 6/27/07.

Allowable Subject Matter

4. Claims 1-19 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The antiglare film as claimed in each of independent claims 1 and 11 is patentable with respect to the prior art, in particular, the U.S. Patent Nos. 6,710,923 and 6,217,176 by the limitations related to the structure of the particles disposed in the film. It is noted that an antiglare device having two kind of particles disposed in a transparent resin substrate wherein the particles have

their refractive indices different from that of the substrate and the particles have different shapes and size is disclosed in the art as can be seen in the each of the mentioned Patents, in particular, the Patent No. 6,710,923, see columns 5-6 and fig. 1. It is also noted that a particle or a microparticle has a bowl-shaped configuration is disclosed in the U.S. Patent Nos. 5,559,202 and 6,184,300; however, the element disclosed in each of the Patents '202 and '300 does not relate to an antiglare film having two kinds of different particles disposed in a transparent substrate as claimed. The device of the Patent Nos. '923 and '176 does not disclose the feature related to the bowl-shaped configuration of one of the particles disposed in the substrate wherein the difference in refractive indices of the substrate and the bowl-shaped particles is larger or equal to 0.03. It is noted that there is not any suggestion provided in each of the Patents '923 and '176 to combine the device disclosed in the Patents '923 or '176 with the particles having bowl-shaped configuration disclosed in each of the Patents '202 and '300. The structure of an antiglare film having a substrate supporting two kinds of particles having spherical and bowl-shaped configurations is disclosed in each of the Pub. No. 2006/0057344 and the Japanese reference No. 2005-189258; however, the effective filing date of each of the Pub. No. 2006/0057344 and the Japanese reference No. 2005-189258 is later than the effective filing date of the present application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
